JOBBYIST SA

Round 1 Equity Ownership Proposal

Private Micro-Seed Launch Capital Proposal

Prepared for early angel investors and strategic supporters

A subsidiary initiative of Gravitas Industries | South Africa MVP launch: 15 July 2026

Platform: https://za.jobbyist.africa | Contact: support@jobbyist.africa

Planning date: 3 June 2026

Investor hook

Jobbyist SA is seeking a small, focused launch-capital round to convert a nearly ready platform into a live South African MVP. The round is intentionally lean: acquire and protect the critical digital assets, fund the .cv registrar integration deposit, activate AI backend credits, support mobile prototyping, and launch with enough operational polish to produce measurable proof points before the next investor phase.

Key item	Proposal detail
Round target	US$1,800 / approx R29,466
Minimum close by 1 July 2026	75% of target: US$1,350 / approx R22,100
MVP launch date	15 July 2026
Recommended equity offer	Up to 3.0% non-voting/economic ordinary equity for the full target
Implied valuation	Approx US$60,000 post-money / US$58,200 pre-money

Private circulation only. Not a public offer, prospectus, financial advice, tax advice, or legal advice.

Table of Contents

---

1. Executive Summary

Jobbyist SA is an Africa-focused job discovery and career management platform being launched in South Africa as a subsidiary initiative of Gravitas Industries. The platform is designed for jobseekers, working professionals, employers, recruiters and service providers who need a more structured, data-aware and AI-assisted way to connect career intent with real market opportunity.

The immediate objective is not to raise a large vanity round. It is to complete the smallest serious funding round required to launch the South African MVP on 15 July 2026 with the core infrastructure, integrations and operating capacity in place. This round asks for approximately US$1,800, with at least 75% secured by 1 July 2026. That deadline matters because the .cv integration deposit, AI credits, digital asset protection and launch operations must be funded before the MVP goes public.

Plain-English investment thesis

This is a high-risk, pre-launch micro-seed round. The upside is early exposure to a career-tech platform before MVP data exists. The discipline is that every rand in this round is tied to launch-critical work, not vague "growth" spending.

Item	Detail
Company / initiative	Jobbyist SA, subsidiary initiative of Gravitas Industries
Platform	https://za.jobbyist.africa
Stage	Pre-launch to early stage startup
MVP launch	South Africa MVP targeted for 15 July 2026
Round type	Private Round 1 micro-seed equity offer

Funding target	US$1,800 / approx R29,466 using a working planning rate of USD 1 = ZAR 16.37
Minimum close	US$1,350 / approx R22,100 by 1 July 2026
Equity available	Up to 3.0% for the full target, structured as non-voting/economic ordinary equity unless otherwise agreed
Use of funds	Digital asset protection, .cv registrar accreditation deposit, AI credits, development credits, SEO, mobile prototyping and testing

Working FX note: ZAR amounts in this proposal use a planning assumption of USD 1 = ZAR 16.37 and are rounded. The final subscription documents should use the bank, payment processor, or agreed spot rate on the signing date.

2. The Opportunity

Jobbyist is positioned at the intersection of job discovery, career readiness, AI-assisted candidate tooling, recruiter workflows and professional identity. The first market focus is South Africa, where the MVP can validate the product, pricing, fulfilment model and user acquisition channels before a broader African expansion thesis is taken to larger investors.

The early wedge is deliberately practical: help professionals become more visible, more organised and more effective in the job search process. The broader ambition is to become a career management layer for African professionals and a matching layer for employers and recruiters.

Market problem	Jobbyist response
Jobseekers struggle with scattered job boards, weak CVs, poor tracking and low follow-through.	Structured job-search workflows, ATS-ready CV optimisation, application tracking, curated listings and guided support.
Professionals need remote-friendly opportunities but often lack positioning, confidence and a repeatable search system.	30-Day Remote Job Search Sprint, LinkedIn review, outreach templates, interview preparation and accountability checkpoints.
Recruiters and employers need better signal from candidates without adding more manual screening burden.	Future AI-assisted matching, candidate profiles, verified career assets and recruiter/employer products.
Career tools are often fragmented across templates, coaching, listings, domains and AI assistants.	A unified Jobbyist ecosystem that can package services, software and professional identity into one journey.

Founder discipline

The first phase must prove execution, not merely vision. The MVP should show whether users will register, pay, complete workflows, return for guidance, refer others and create enough market signal to justify a larger second-phase investor conversation.

3. Product, MVP Scope and Launch Positioning

The South African MVP should be presented as a focused launch platform, not as a finished continent-wide marketplace. Investors should see a clear progression from service-led validation to platform-led scale.

MVP component	Launch role
Candidate onboarding	User registration, profile setup, career goals, skills and target role preferences.
Job discovery	Curated remote and career opportunity listings aligned with target roles and user intent.
Career assets	ATS-ready CV optimisation, cover letter templates, LinkedIn recommendations and messaging templates.
Workflow management	Application tracking spreadsheet or in-platform tracker, daily and weekly task checklists, progress review.
AI backend services	AI-assisted CV writing, job matching, template generation, interview prep and career guidance across selected models.
Resource library	Reusable digital resources, guides, checklists and playbooks that reduce delivery effort over time.
.cv registrar pathway	Accreditation and integration path through hello.cv to support professional identity, domains and future monetisation.
Mobile prototype	Android and iOS prototyping/testing to validate mobile-first workflows before larger app investment.

What the MVP must prove

By the end of the launch window, Jobbyist should be able to show a clean platform experience, working critical dependencies, evidence of user demand, early paid-service traction or conversion intent, and a credible operating rhythm for support, fulfilment and iteration.

4. Revenue Model and Initial Commercial Products

Jobbyist can begin earning revenue through service-led career products while the platform matures. This is sensible for an early-stage startup because services generate direct user feedback, reveal willingness to pay and turn the launch period into a learning engine rather than a passive waiting room.

Product tier	Price range	Core value
DIY Toolkit	R199 - R349	Self-paced templates, trackers, guides and resource-library access.
Sprint Lite	R499 - R799	Guided structure with limited support and curated action steps.
Guided Sprint	R999 - R1,499	Full 30-day guided engagement with structured support and review.

Product tier	Price range	Core value
Premium Sprint	R1,999 - R2,999	Intensive support, priority access, deeper review and higher-touch guidance.

Early revenue channels

- B2C career support products: toolkits, guided sprints, premium sprint engagements and add-on coaching or review services.
- AI-assisted career utilities: CV improvement, application tailoring, interview preparation and job matching workflows.
- Professional identity products: future .cv domain registration, profile pages and digital career assets.
- B2B and recruiter products: future employer listings, recruiter access, candidate search, sponsored roles and hiring workflow tools.
- Partnership channels: training providers, communities, universities, career coaches and remote-work networks.

The first commercial priority should be simple: prove that users will pay for a sharper, more organised job-search outcome before spending heavily on marketplace complexity. The platform can scale once repeatable user behaviour and acquisition economics are visible.

5. Round 1 Funding Ask

Jobbyist SA is seeking approximately US$1,800 in Round 1 launch capital. At least 75% of this amount, US$1,350, should be secured by 1 July 2026 to protect the MVP launch schedule. The remaining 25%, US$450, should be closed before or during the launch window so the team can execute without starving key dependencies.

Funding item	Amount	Purpose
Full target	US$1,800 / approx R29,466	Funds the full launch-critical budget.
Minimum close	US$1,350 / approx R22,100	Must be secured by 1 July 2026 to keep launch on track.
Remaining balance	US$450 / approx R7,367	Closes the final gap before the 15 July 2026 MVP launch window.
Preferred close structure	Single close or rolling close	Subscription documents should specify the accepted exchange rate and exact share allocation.

Investment discipline

This is a launch-capital round. It should not be sold as enough capital to dominate the market. It is enough to open the doors, run the MVP properly, collect evidence, and prepare a more credible second-phase investor conversation later in 2026.

6. Use of Funds

The Round 1 budget is intentionally narrow. Each line item is connected to either launch readiness, platform credibility, operational capability or proof-of-concept delivery.

Budget line	USD	Approx ZAR	Launch rationale
Digital Asset Acquisition & Protection	US$150	R2,456	Regional domains, trademarks/copyrights, storage, analytics and user-data encryption.
Critical Platform Dependencies, Integrations & .cv Registrar Accreditation	US$1,000	R16,370	Upfront deposit required with service integration partner hello.cv and related platform integration setup.
AI Backend Integration Services	US$150	R2,456	First-month usage credits for Gemini and OpenAI at US$75 credit limit per platform.
Workflow Automations, Development Credits & SEO	US$250	R4,093	Lovable, GitHub/development credits, workflow automations and outsourced ongoing SEO updates.
Android & iOS Mobile App Development, Prototyping & Testing	US$250	R4,093	Mobile prototype, device-flow testing, app-store readiness exploration and user experience validation.
TOTAL	**US$1,800**	**R29,466**	**Full Round 1 launch-capital requirement.**

Cash control recommendation

Funds should be released against documented invoices, signed service agreements or platform credit purchases. For the hello.cv deposit, the team should confirm refundability, service scope, integration responsibilities and accreditation deliverables before payment.

7. Proposed Equity Ownership Terms

For a round this small, the founder-protective structure is important. The investor should receive a clear, fair economic stake, but not operational control or disproportionate rights that make future fundraising harder. The recommended offer is up to 3.0% equity for the full US$1,800 target.

Term	Recommended position
Instrument	Private subscription for non-voting ordinary/economic shares, or a SAFE/convertible-style agreement if share issuance needs to wait for legal structuring.

Term	Recommended position
Issuer	Jobbyist SA if separately incorporated and authorised to issue shares. If not, Gravitas Industries may issue the investment instrument with ring-fenced beneficial economic rights linked to Jobbyist SA until subsidiary share issuance is completed.
Full-round equity	Up to 3.0% for US$1,800.
Minimum-close equity	Up to 2.25% for US$1,350 on the same valuation basis.
Implied valuation	Approx US$60,000 post-money and US$58,200 pre-money at the full target.
Share class	Non-voting ordinary/economic equity recommended unless a strategic investor justifies negotiated voting or advisory rights.
Investor control	No day-to-day operational control, hiring authority, product veto, code ownership, account access or unilateral spending authority.
Transfer restrictions	No transfer, resale or encumbrance without company approval and compliance with shareholder agreement restrictions.
Information rights	Monthly updates until MVP launch, then quarterly investor updates covering product, traction, spend, risks and next milestones.
Future round rights	Pro-rata participation right in the next priced equity round is recommended. Broad anti-dilution is not recommended for this micro-round.

Founder-protection red line

For US$1,800, Jobbyist should not sell a double-digit ownership stake, surrender product control, or accept heavy anti-dilution rights. If an investor wants more than 4.0% for this round, the better structure is probably a loan, revenue-share, milestone-based SAFE, or a strategic services agreement rather than ordinary equity.

8. Investor Ticket Examples and Cap Table Impact

The following ticket examples assume the recommended valuation basis of US$600 per 1.0% equity, capped at 3.0% for the full US$1,800 target. Final share numbers should be calculated by counsel or the company secretary using the authorised share capital and applicable shareholder documents.

Investor contribution	Approx ZAR	Equity allocation
US$250	R4,093	0.4167%
US$500	R8,185	0.8333%
US$900	R14,733	1.5000%

Investor contribution	Approx ZAR	Equity allocation
US$1,350	R22,100	2.2500%
US$1,800	R29,466	3.0000%

Scenario	Founder/parent ownership	Founder/parent %	Round 1 investor %
Pre-round	Gravitas Industries / founders	100.00%	0.00%
Minimum close	Gravitas Industries / founders	97.75%	2.25%
Full close	Gravitas Industries / founders	97.00%	3.00%

9. Milestones and Timeline

Date / period	Milestone	Investor-visible output
3 June 2026	Round 1 proposal finalised	Confirm investment structure, budget, investor materials and legal review path.
By 15 June 2026	Investor conversations and soft commitments	Secure verbal or written indications, clarify rights, confirm payment process and documentation.
By 1 July 2026	Minimum close: 75% funded	Secure at least US$1,350 / approx R22,100 to protect the MVP launch schedule.
1-14 July 2026	Launch readiness sprint	Pay critical deposits/credits, finalise integrations, QA core platform flows, prepare support and reporting.
15 July 2026	South Africa MVP launch	Launch public MVP, activate user onboarding and begin measuring early acquisition and usage.
31 July 2026	First launch performance snapshot	Report on spend, live functionality, user signups, conversion intent, issues, fixes and next priorities.
Q3-Q4 2026	Second-phase investor readiness	Use MVP data to prepare a stronger larger-round case for product development and potential expansion into Egypt and Morocco.

10. Risk Factors and Mitigation

This proposal is credible only if the risks are named plainly. Pre-launch startups fail most often because they confuse ambition with traction, ignore legal friction, underprice customer acquisition, or build too broadly before the first users prove the model. Jobbyist should treat the following risks as active management items, not footnotes.

Risk	Why it matters	Mitigation
Pre-launch execution risk	The MVP may miss deadlines or launch with incomplete functionality.	Use the 1 July minimum-close deadline, freeze MVP scope, prioritise critical flows and avoid non-essential features before launch.
Integration dependency risk	The hello.cv accreditation/integration path may cost more, take longer or require more technical work than expected.	Confirm deliverables, service scope, timelines, refundability and technical responsibilities before paying the deposit.
Regulatory and privacy risk	Career data, user profiles and AI tools create privacy and compliance obligations.	Implement user-data encryption, privacy notices, consent flows, access controls and attorney-reviewed policies before scale.
Customer acquisition risk	Users may not convert from interest to paid tiers at acceptable rates.	Start with service-led products, track funnel metrics weekly, test price points and prioritise channels that produce paid intent.
Employment-outcome risk	Users may expect guaranteed interviews or jobs.	Maintain clear disclaimers, transparent service terms and a money-back policy tied to user participation, not job placement promises.
AI cost and reliability risk	Model usage can become expensive or inconsistent as users scale.	Set strict credit limits, monitor prompts and usage, design fallback workflows and evaluate model performance per use case.
Currency risk	USD-denominated services can increase in rand terms before payment.	Set a signing-date FX rule, reserve a contingency where possible and prioritise payments by launch criticality.
Future dilution risk	A later investor may require new equity issuance, diluting early shareholders.	Explain dilution upfront and give Round 1 investors pro-rata participation rights in the next priced round.

11. Governance, Reporting and Investor Protections

The right governance for this round is simple, clean and investor-aware. Over-engineering governance for a US$1,800 round will slow the company down. Under-engineering it will create mistrust. The middle ground is transparent reporting, clean documentation and sensible reserved matters.

Governance area	Recommended approach
Documentation	Signed subscription agreement, shareholder agreement or SAFE/convertible instrument before funds are accepted.
Funds usage	Funds used only for approved Round 1 budget lines unless investor consent is obtained for material reallocation.
Updates	Monthly updates until launch, then quarterly updates thereafter.
Financial records	Receipts, invoices, platform credit records and bank/payment confirmations retained for investor review.

Governance area	Recommended approach
Reserved matters	Material asset sale, major pivot away from Jobbyist, liquidation, merger, or issuance of senior rights to be disclosed before execution where legally possible.
No operational interference	Investors do not receive admin access, code ownership, HR control, spending authority or product veto rights.
Confidentiality	Investor materials, roadmaps, credentials, partner terms and user data remain confidential.

12. Why This Round Is Investable

The strongest reason to invest is not that Jobbyist is guaranteed to win. It is not. The strongest reason is that this is a small, highly targeted round that can unlock a specific launch event and produce real evidence quickly. That makes the risk easier to understand.

- The funding target is small enough to be testable and accountable.
- The use of funds is specific, practical and tied to launch-critical dependencies.
- The South Africa MVP has a fixed launch date and a clear minimum-close funding deadline.
- The initial service tiers create a realistic path to early revenue before the platform needs full marketplace liquidity.
- The .cv registrar pathway creates a distinctive professional identity angle beyond ordinary job listings.
- AI backend services can improve fulfilment efficiency if costs and outputs are tightly monitored.
- The round preserves founder control while still giving early investors clear economic exposure.
- The next phase can be approached with MVP data rather than pure narrative.

Investor expectation setting

This round should be evaluated as a launch catalyst, not a mature-company investment. The investor is backing execution speed, disciplined spending, early traction data and a stronger second-phase raise story.

13. Closing Commitment and Next Steps

Jobbyist SA is inviting early investors to participate in Round 1 under the proposed micro-seed equity structure. The company is targeting a full close of approximately US$1,800, with at least US$1,350 committed and received by 1 July 2026.

1. Investor confirms intended contribution amount and preferred structure.
2. Jobbyist confirms the final ZAR equivalent using the agreed signing-date exchange rate.
3. Legal/accounting review confirms the correct issuer, instrument and share allocation.
4. Parties sign the subscription, shareholder or SAFE/convertible agreement.
5. Funds are received into the agreed account or escrow process.
6. Jobbyist issues confirmation of allocation and begins monthly reporting through the launch period.

Recommended call to action: Secure written commitments before 25 June 2026 and complete funding by 1 July 2026 so the MVP launch schedule is not forced into last-minute compromise.

14. Legal and Compliance Disclaimers

- This document is for private discussion with selected potential investors only. It is not a public offer, prospectus, solicitation to the general public, financial advice, tax advice or legal advice.
- Any investment is speculative and high risk. Early-stage startups may fail, and investors may lose all invested capital.
- No return, dividend, exit, liquidity event, valuation increase, job placement outcome or future fundraising success is guaranteed.
- All final terms are subject to legal documentation, board/shareholder approvals where applicable, tax/accounting review and compliance with South African company law and any applicable securities, exchange control, consumer protection, privacy and fundraising requirements.
- If Jobbyist SA is not yet legally structured to issue shares directly, the investment should be documented through Gravitas Industries with explicit ring-fenced economic rights or a conversion mechanism into Jobbyist SA equity once legally possible.
- Investors should obtain independent legal, financial and tax advice before subscribing.
- Forward-looking statements in this document are based on current plans and assumptions as of 3 June 2026 and may change as market, technical, legal and operational conditions evolve.
